

## Shop Cruelty-Free Brands

*“Before their deaths, some are forced to inhale toxic fumes, others are immobilized in restraint devices for hours, some have holes drilled into their skulls, and others have their skin burned off or their spinal cords crushed. In addition to the torment of the actual experiments, animals in laboratories are deprived of everything that is natural and important to them—they are confined to barren cages, socially isolated, and psychologically traumatized” (PETA).*

According to PETA, more than **100 million** animals are abused and killed for animal experimentation every year. However, nearly **94%** of all successful animal trials fail in human clinical trials and many more effective technological alternatives exist, thus making animal testing not merely a **cruel** practice but one which is completely **unnecessary** in the modern world. Please do your part in fighting this inhumanity by **voting with your dollar**: refusing products which are tested on animals and opting for cruelty-free products instead.
